

Yellow Comet Megatank instructions

step 1

Print the parts on thicker paper (I use 200 gsm myself) and get out your papercrafting tools!

step 2

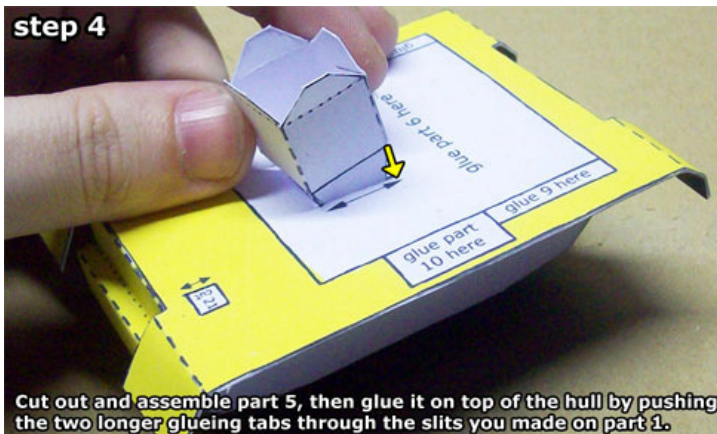

Cut out and pre-shape parts 1 and 2. Don't forget the four slits you need to cut on part 1!

step 3

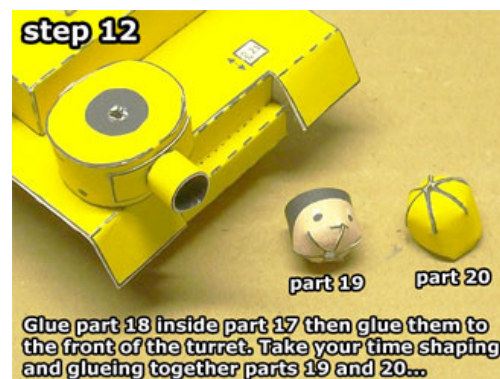

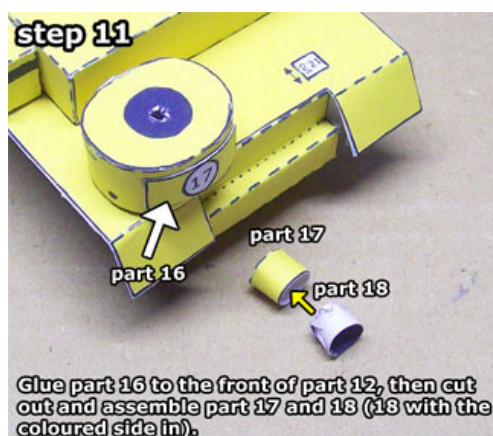

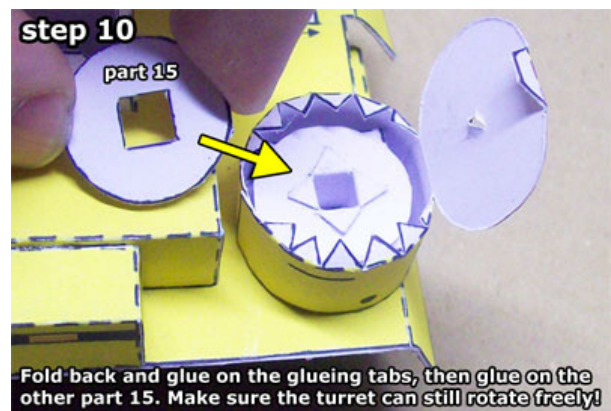

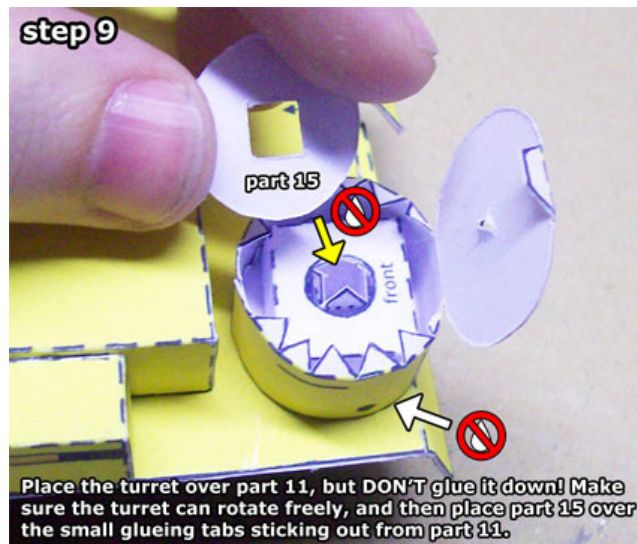

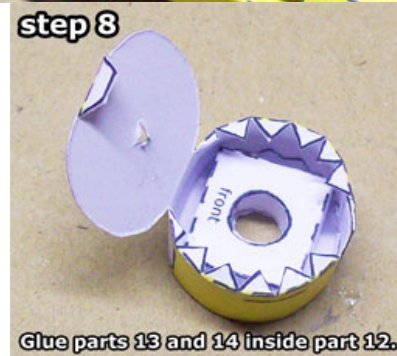

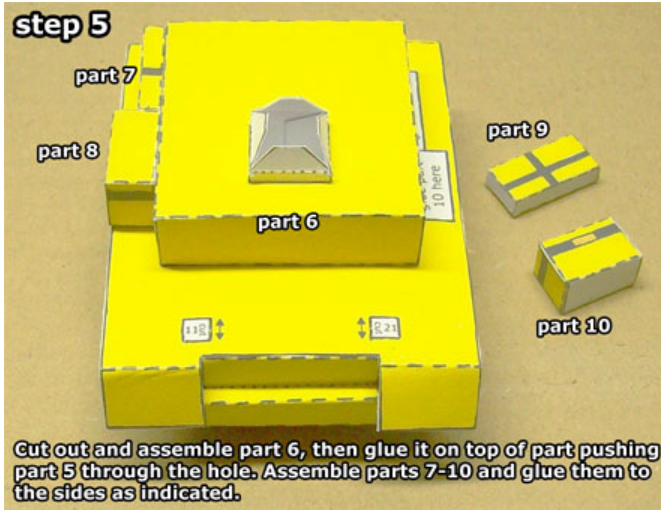

Glue parts 1 and 2 together (the "stepped" side of part 2 on the same side of the longer "flaps" on part 1) and then cut out and glue on parts 3 and 4 underneath.

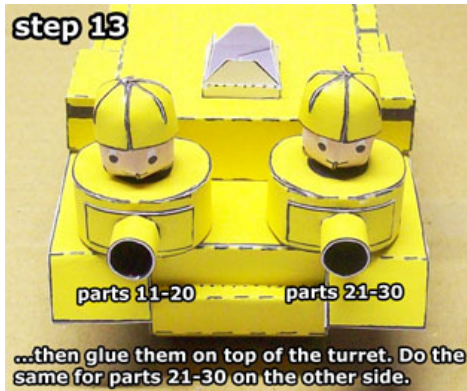

step 4

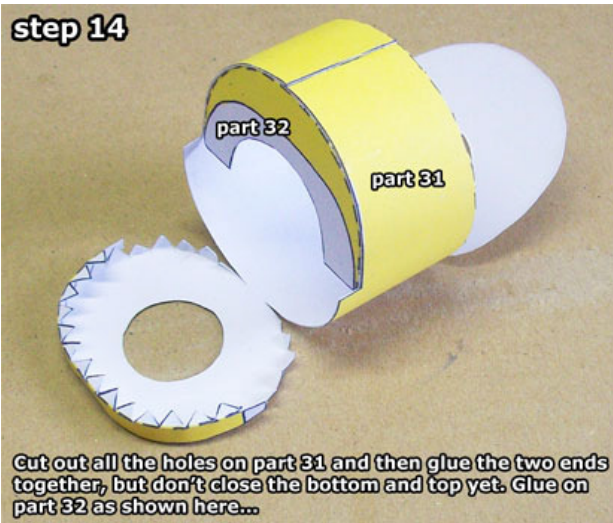

Cut out and assemble part 5, then glue it on top of the hull by pushing the two longer glueing tabs through the slits you made on part 1.

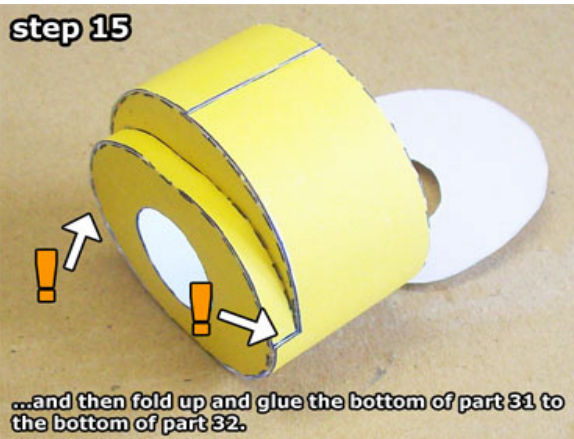

step 13

step 14

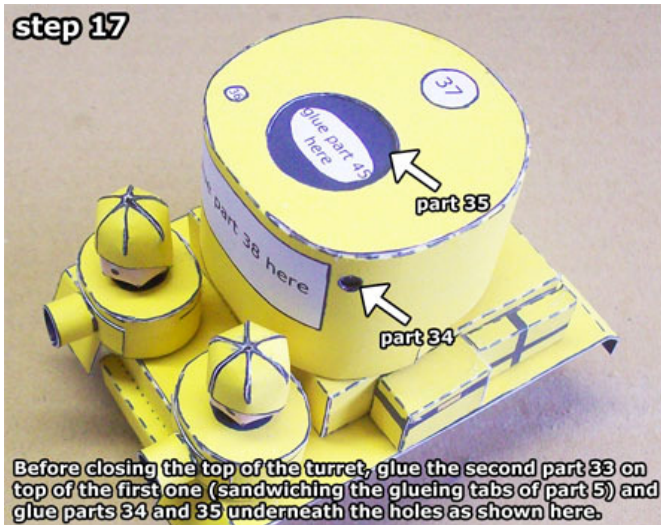

step 15

step 16

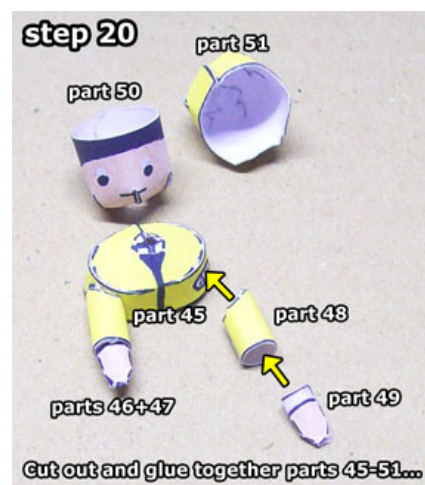

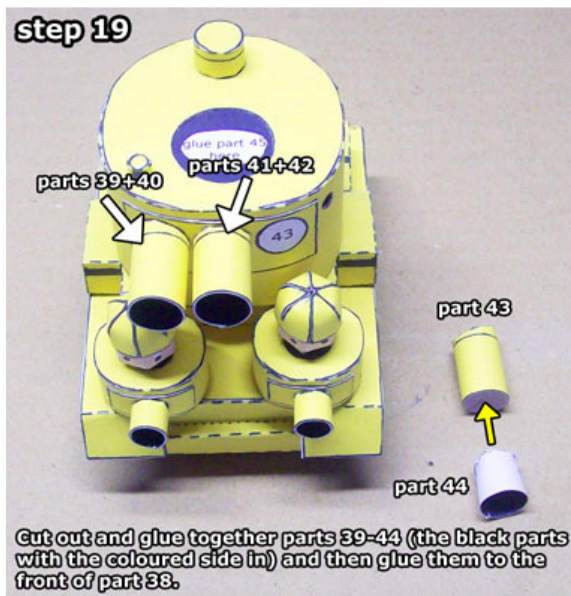

step 17

step 18

step 21

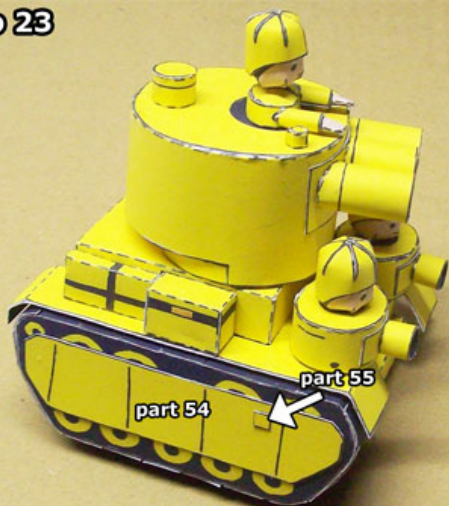

...and then glue the little soldier (well, half of him anyway) on top of the tank like so.

step 22

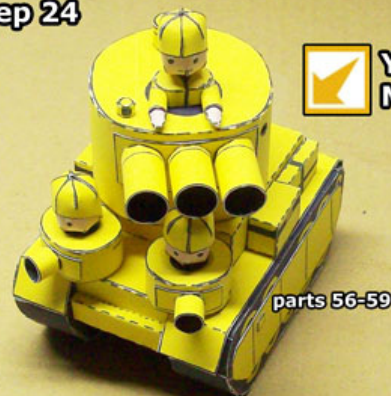

Cut out and assemble part 52, then glue on parts 53. Some of them need to be pre-shaped, to glue onto the curved parts.

step 23

Glue the tank tread to the side of the hull as indicated, and then glue on parts 54 and 55.

step 24

 **Yellow Comet Megatank**

Do the same for parts 56-59, and your Megatank is finished! Thank you for downloading and building a Ninjatoes' papercraft model!

Black Hole Megatank

The only difference between the Allied Nations' Megatanks and the ones from Black Hole, is who's driving it.
